Rethinking poverty, food security, &
public health systems:
Healing people and the planet

What are the underlying psychological processes necessary to overcoming the converging crises of poverty, food insecurity, global health, and environmental justice? This 1-hour global webinar, will explore an innovative program that is a model for meeting the UN Sustainable Development Goals (SDGs).

Welcome: Laura Tietjen
Anjhula Mya Singh-Bais, Ph.D. Malaysia
John Fraser, Ph.D. AIA USA
Isabelle Kamariza, Rwanda

08:00 am EST / 13:00 GMT
Friday 26 February 2021,
Zoom: https://fordham.zoom.us/j/2126366393

All are welcome

Poverty & Food Security: Psychology for Healing People and the Planet,

This program will use an innovative social change program in Rwanda that seeks to transform African health policy by entrenching food security as part of national public health security systems. The program will start with an introduction to Solid’Africa’s innovative farm to fork solution providing food security for the world’s most at risk populations as they move through the public health system. The project will explore the psychological dimensions of a program that seems to the comorbidities of:

1) beliefs, values, and motivations for ending food insecurity during crisis
2) self-determination, volunteerism, and collective identity
3) environmental justice through sustainable farming and
4) public health policy and food security
