Recent Advances in the Psychological Treatment of PTSD

Terence M. Keane, PhD
Director of the National Center for PTSD-Behavioral Sciences Division and Associate Chief of Staff for Research & Development at VA Boston | Professor of Psychiatry and Psychology and Assistant Dean for Research at Boston University School of Medicine

Thursday, April 20, 2017
6:00-8:00 p.m.

American Psychological Association
Spire Conference Center
750 First Street, NE
Washington, DC 20002

Registration is FREE, but space is limited.

People exposed to traumatic events—from victims of crime to those engaged in warfare—may develop posttraumatic stress disorder (PTSD). Scientific advances in the psychological treatment of PTSD suggest there are now multiple treatments that work to reduce symptoms and improve the lives of individuals with PTSD. What treatments work? What are some of the barriers to accessing evidence-based psychotherapy? How do we overcome those barriers?

Terence M. Keane, PhD, a world leader in the field of traumatic stress, has published more than 300 articles, books and chapters on PTSD, and his program of trauma research has been continuously funded for the past 37 years. His contributions to the field have been recognized by two honorary doctorates and many honors for his contributions to opening the field of psychological trauma to scientific inquiry. In 2015 he was the recipient of the John Blair Barnwell Award from the Department of Veterans Affairs, the highest national award for those engaged in clinical research.
