

Title: Research Psychologist

Department: US Navy

Job Summary

Research Psychologist: There are many possible career paths as a Navy Research Psychologist. Early positions often involve submarine, diving and medical research in laboratory and field settings, on a wide variety of variables affecting numerous aspects of human performance in military systems.

Navy Research Psychologists also manage large research and development efforts in laboratories and provide staff assistance related to human performance, training and personnel issues.

Duties

As a Research Psychologist and Officer in the Medical Service Corps, you will be among approximately two dozen research psychologists who deliver operational products, systems and procedures that dramatically impact the health, safety and performance of service members. Areas of specialty include cognitive, experimental, social, industrial/organizational, human factors, engineering, personnel, neuroscience, and physiological.
